

## Providing the most appropriate solutions, the best advice and highest quality of service.

As organisations connect to more internal and external networks, there is a correlating increase in the number of potential vulnerabilities they are exposed to. In this complex market where selecting and using the right product is critical, and the impact of getting it wrong can be catastrophic, our customers choose Novosco because of our experience and expertise.

Maintaining a strong protective stance in the increasingly volatile threat landscape requires a specialist skill set – and a security conscious mindset. Security cannot be effective if it is considered as an afterthought to other infrastructure and application projects. Security considerations run through everything we do, from scoping new hardware to providing consultancy and managed services.

Novosco's varied experience across datacentre and network infrastructure enables us to fully appreciate the complexities of customer environments and security considerations which need to be accommodated, whether they are technical or human processes.

## Overview

### Challenges

- As technology becomes more advanced so do security threats
- Lack of internal security expertise
- Time and skills to proactively monitor threats
- Timely response to incidents and threats

### Use cases

- Predictable cost requirement
- Geographically dispersed sites
- Scalability of existing technology
- Proactive monitoring needed

### Benefits

- Managed Services removes strain from internal IT
- Improved security
- Lower risk
- Cost efficient

## Improve Security

Implementing security solutions is not a fit-and-forget scenario. Managing and maintaining is of equally vital importance to ensure that the solutions in place continue to provide optimal levels of security and peace of mind for your business.

## Lower Risk

With Novosco experts on your side, your organisation has the peace of mind that we do everything we can to prevent security incidents, but should the worst occur we're there, minimizing any damage and working to get everything back on track.

## Cost Efficiency

We are an extension of your IT team, providing additional skills and expertise, or to do the tasks that your team don't have the time to. This provides better cost efficiency and reduces the probability of a breach, leaving your IT department free to focus on their core roles. Rather than representing a loss of control over your organisation's security, a Managed Security Service from Novosco means your internal team has the time to find innovative new ways to use IT to better serve the business' needs, while security is still a priority.

Proactive monitoring

Analytics and reporting

Experienced teams of security experts act and advise on threats and incidents

Award-winning customer service

Guaranteed service level agreements

## Novosco Managed Security Services

Novosco provide a wide range of managed security services and consultancy. From spam filters and firewall configurations all the way to DDoS mitigation solutions and proactive threat monitoring, Novosco delivers outstanding customer service via our highly accredited technical teams and the best in class vendor technologies we recommend.

Whatever your security requirement, talk to the experts at Novosco to ensure that your business has the right security solutions and that they are optimised to protect your organisation.
