

When it comes to backup, one size does not fit all.

The Novosco Backup as a Service (BaaS) solution leverages best of breed technology to deliver off-site backup, allowing your organisation to plan for the unexpected.

Our highly resilient technology and trusted experts leave you to focus on your business and rest assured that your data is secure.

Key features of Novosco BaaS include:

- Off-site backup
- On-premise node to enable LAN restore
- Broadband friendly
- Backup migration
- Local vSphere integration
- OS support: Windows server, Linux, Mac
- Application plug-ins: MS Exchange, SQL Server, Windows Server System State
- On request physical shipment of restored data to your site
- Proactively managed and monitored backup environment

The solution

Overview

Challenges

- Zero data loss, where possible
- Peace of mind
- Fast and accurate restore/testing
- Concerns about recoverability

Use cases

- New backup infrastructure required but insufficient CAPEX
- Consolidation of backup infrastructures
- High overhead managing existing backup solution
- Off-site backup required by regulations/compliance
- Complex multiple backup requires simplification
- Hardware reached EOL
- System renewal is due

Benefits

- Managed service
- Predictable costs
- Cost effective
- High performance
- Scalable
- Resilient and flexible
- Green IT

Trusted expertise

We have been successfully providing backup for customers across a range of different technologies for many years. We know and understand the challenges backup and restores present. Our trusted experts use this knowledge and frontline experience, ensuring that you enjoy a hassle-free backup service.

The best of both worlds

With Novosco BaaS you get very fast local targets for daily backups within our data centre or on your premises through data centre hosted capacity targets. All while using the best that public cloud providers, like AWS and Azure have to offer in terms of longer term data retention.

Dual Data Centre capability

If you decide to use any of our hosting services, we can replicate your backup data to a peer data centre. If you're an on-premise customer, we can replicate to one of our data centres and the public cloud, in addition to local backup copies on-premise.

Software smarts

By using leading virtual machine (VM) centric data protection technologies, Novosco BaaS offers not only a better backup solution, but also great reporting, so you know exactly what is protected.

Business Results & Benefits

Residing on a highly resilient infrastructure, Novosco BaaS provides backup capacity as you need it. If server numbers expand or contract, you only pay for the volume of data that you backup. This is crucial if you need to expand quickly, while also helping you to effectively manage costs.

With Novosco BaaS you can reduce, if not entirely eliminate, your CAPEX plans and on-premise maintenance costs. The Novosco BaaS subscription service is classed entirely as OPEX, further savings can also be realized.

The Novosco BaaS environment is monitored 24/7 and proactively managed. As part of the service, all security, patching, and upgrades are taken care of, meaning you get on with business without the worry.

By removing the requirement for transportation and storage of tapes you are reducing your company's IT carbon footprint and saving on operational expenditure.
